

KEY INFORMATION FEE SCHEDULE

PURPOSE

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

PRODUCT

Name of Product: Non-Exotic Rolling Spot FX, CFI Code: JFTXCN

Date of Production: 2 January 2018

Name of PRIIP Manufacturer and competent authority: LMAX Global is a trading name of LMAX Broker Limited which is authorised and regulated by the Financial Conduct Authority (firm reference number 783200) and is a company registered in England and Wales (number 10819525).

Website: <https://www.lmax.com/global>

Call: +44 20 3192 2555 for more information.

YOU ARE ABOUT TO PURCHASE A PRODUCT THAT IS NOT SIMPLE AND MAY BE DIFFICULT TO UNDERSTAND

WHAT IS THIS PRODUCT?

Type: This product is considered a leveraged Over the Counter derivative instrument. It is a rolling contract, traded in notional volume, where the value of the trade derives from the difference in spot prices of the currencies in the FX pair.

Objectives: Short Term Investment returns from price fluctuations in volatile markets.

Intended Retail Investor: This product is designed for short term speculative investors with experience in trading in volatile liquid markets.

Term: Rolling Spot FX contracts have no maturity date and open positions will be rolled onto the next day unless the client closes his/her position, or if the positions are closed by LMAX Global during an Event of Default (please see our Terms of Business for further information).

WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because

of movements in the markets or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class.

Our services involve a high degree of gearing or leverage. This can work for and against you as a relatively small movement in the price of the financial instrument may result in you achieving a profit but equally may result in you incurring loss. Furthermore, where there is low liquidity, it may not be possible to close your open trades immediately. During this period the value of your open trades could fall significantly. Fluctuations in markets outside our control and the historical performance of a financial instrument is no indication as to its future performance. In some circumstances you may be required to make further payments to pay for losses. **The total loss you may incur may be significant.**

For further information please see our see Risk Warning Notice.

PERFORMANCE SCENARIOS

The performance scenarios are based on trading the FX pair EURCHF for a 30-day period as represented by the candlestick chart. The horizontal axis of the chart shows the day the FX pair is being traded and the vertical axis shows the price of the FX pair.

The chart read in conjunction with the tables illustrate how your investment may perform in different market scenarios depending on whether you were buying or selling an FX pair. You can compare them with the chart and tables of other derivatives. The scenarios presented are indicative of possible outcomes based on evidence from the past on how the value of this investment varies. These are not an exact indication of your returns. What you get will vary depending on how the underlying will develop i.e. how the market performs and how long you hold your position. For each value of the underlying, the tables show what the profit or loss of the product would be. The example figures shown in the tables include all the costs of the product itself. Your maximum loss may include all your investments plus any additional payments for those losses.

Investment = EURCHF

The below table shows four clients entering into trades indicated by the arrows on the adjacent graph.

Client	Deposit	Open Time	Type	Volume	Open Price
A	20000	2016.06.07	Sell	1	1.1010
B	20000	2016.06.07	Buy	1	1.09890
C	20000	2016.06.13	Buy	1	1.08511
D	3500	2016.06.13	Buy	1	1.08511

SCENARIOS

The table below indicates what the clients would expect to receive if they chose to close their trades on the same day, after one week and after one month.

Scenario	Client	1 day					1 week					1 month					Stress Event				
		Close Price	P&L	Equity	comm	Financing	Close Price	P&L	Equity	comm	Financing	Close Price	P&L	Equity	comm	Financing	Close Price	P&L	Equity	comm	Financing
Favourable	A	1.09624	476	20,476	-5	-9.64	1.08535	1,565	21,565	-5	-14.4	1.08315	1,785	21,785	-5	-11.2					
Unfavourable	B	1.09624	-266	19,734	-5	-14.4	1.08535	-1,355	18,645	-5	-14.4	1.08315	-1,575	20,110	-5	-19.2					
Moderate	C	1.08666	155	20155	-5	-11.4	1.0815	-361	19639	-5	-11.4	1.08593	82	20082	-5	-15.9					
Stressed	D	1.08666	155	3655	-5	-11.4	1.0815	-361	3139	-5	-11.4						1.06191	-2320	1180	-5	-11.9

The equity shown at each time interval is equal to the unrealised profit and loss on the clients' accounts. Providing there are no other active trades on the clients' accounts if the clients close their position at each time interval the equity is equal to the account balance. The profit and loss figures for each trade will be subject to a commission charge and financing charge displayed. Trades held over-night are subject to financing charges as indicated in the table, further information for which can be found in the cost section.

Client A and B both enter opposing trades on the same trading day as indicated by the green arrow on the graph.

Client A: The market sustains a steady decline where Client A continually makes a profit regardless of when they close the trades

Client B: The market sustains a steady decline where Client B continually makes a loss regardless of when they close their trade. Client C and D both enter identical trades with different deposit amounts on the same trading day as indicated by the blue arrow on the graph.

Client C: The client makes a profit where they close their trade on the same day as the FX pair benefits from a sustained increase in price after the previous declining market. Where the client chooses to close their trades after a week they will make a loss as the market has fallen into adjustment. It is worth noting if Client C chose to close their position on the same trading day as Client D was closed out (please see below), they too would have incurred significant losses. The difference for Client C is they would have had sufficient margin on their account for the position to remain open till the end of the month. Therefore, where Client C closes their trade after one month they make a profit, however that profit is diluted by the financing charges incurred by holding their position for 30 days.

Client D: The client makes the exact same profit and loss as Client C when closing their position on the same day or after one week. The difference for Client D is where the yellow arrow on the graph highlights a stress scenario. During this trading day the FX pair collapsed triggered by a news event resulting in volatile price movement. This volatile price movement caused a major loss on Client D's account. Due to insufficient funds on account Client D has reached his Margin Close Out Level therefore his trade has been closed automatically at a loss. For further information on Margin Close Out Levels please see the LMAX trading manual <https://www.lmax.com/global/trading-manual>. In order for LMAX to accept an opening Order from clients, their Available to Trade Balance will normally be required to contain sufficient resources to cover the margin required for the Orders that they wish to place.

The Margin Required to place an Order to open a trade is calculated by multiplying (a) the number of contracts requested (b) by the contract size (c) by the opening price shown (for a Market Order) or the specified price (for a Limit Order) (d) by the Margin Factor for the relevant Instrument. The Margin Close Out Level for LMAX Accounts is 70%.

WHAT HAPPENS IF LMAX IS UNABLE TO PAY OUT?

You are exposed to the risk that the manufacturer might be unable to meet its obligations in connection with the product for instance in the event of bankruptcy or insolvency. This may materially adversely affect the value of the product and could lead you to incur a significant loss. Notwithstanding, we segregate your funds in line with the FCA's Client Money Rules. In addition, you are covered by the Financial Services Compensation Scheme. For further information see www.fscs.org.uk.

WHAT ARE THE COSTS?

Composition of Costs

One-off Transaction costs

Trading Commission %	We will charge a commission for each opening and closing trade on your Account. Unless otherwise agreed with you our commission is a fee as a % of notional traded for FX Instruments. The commission rates that we charge are subject to change including but not limited to third party services.	<table><tr><th>Instruments</th><th>Standard</th></tr><tr><td>Rolling Spot FX & Spot Bullion</td><td></td></tr><tr><td>All FX pairs</td><td>0.0025% of the notional traded in the second-named currency</td></tr></table>	Instruments	Standard	Rolling Spot FX & Spot Bullion		All FX pairs	0.0025% of the notional traded in the second-named currency
Instruments	Standard							
Rolling Spot FX & Spot Bullion								
All FX pairs	0.0025% of the notional traded in the second-named currency							

Ongoing costs

Financing Charges (F)	Financing charges are applied to positions held overnight; these charges will be debited from or credited to your account. Please see the UI Trading Manual https://www.lmax.com/global/trading-manual and MT4 Trading Manual for worked examples https://www.lmax.com/global/mt4-trading-manual .	LMAX UI: $F = \text{swap points} \times 10 \times \text{tick value} \times \text{number of Contracts open} \times \text{number of days rolled}$ LMAX MT4: $F = \text{Swap charge} \times \text{Quantity} \times \text{MT4 Tick Value} \times \text{Number of days rolled.}$
